pids

Array used to store 5 Program IDs.

Description

This ioctl allows to query a DVB device to return the first PID used by audio, video, teletext, subtitle and PCR programs on a given service. They're stored as:

PID element	position	content
pids[DMX_PES_AUDIO]	0	first audio PID
pids[DMX_PES_VIDEO]	1	first video PID
pids[DMX_PES_TELETEXT]	2	first teletext PID
pids[DMX_PES_SUBTITLE]	3	first subtitle PID
pids[DMX_PES_PCR]	4	first Program Clock Reference PID

Note

A value equal to 0xffff means that the PID was not filled by the Kernel.

Return Value

On success 0 is returned.

On error -1 is returned, and the `errno` variable is set appropriately.

The generic error codes are described at the [ref: Generic Error Codes <gen-errors>](#) chapter.
