

Missing webpack config

Why This Error Occurred The value returned from the custom webpack function in your `next.config.js` was undefined. This can occur from the initial config value not being returned.

Possible Ways to Fix It Make sure to return the webpack config from your custom webpack function in your `next.config.js`

```
// next.config.js
```

```
module.exports = {  
  webpack: (config, { buildId, dev, isServer, defaultLoaders, webpack }) => {  
    // Note: we provide webpack above so you should not `require` it  
    // Perform customizations to webpack config  
    config.plugins.push(new webpack.IgnorePlugin(/\/__tests__\/))  
  
    // Important: return the modified config  
    return config  
  },  
}
```
