

## GitHub CLI plugin

This plugin adds completion for the GitHub CLI.

To use it, add `gh` to the plugins array in your `zshrc` file:

```
plugins=(... gh)
```

This plugin does not add any aliases.

## Cache

This plugin caches the completion script and is automatically updated when the plugin is loaded, which is usually when you start up a new terminal emulator.

The cache is stored at:

- `$ZSH/plugins/gh/_gh` completions script
- `$ZSH_CACHE_DIR/gh_version` version of GitHub CLI, used to invalidate the cache.
