

With Polyfills

Next.js supports IE11 and all modern browsers (Edge, Firefox, Chrome, Safari, Opera, et al) with no required configuration. It also adds [some polyfills](#) by default.

If your own code or any external npm dependencies require features not supported by your target browsers, you need to add polyfills yourself.

In this case, you should add a top-level import for the specific polyfill you need in your Custom `<App>` or the individual component.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

How to use

Execute [create-next-app](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-polyfills with-polyfills-app
# or
yarn create next-app --example with-polyfills with-polyfills-app
# or
pnpm create next-app -- --example with-polyfills with-polyfills-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
