

ipvs - networking for containers

 Test  passing   reference  go report  A+

ipvs provides a native Go implementation for communicating with IPVS kernel module using a netlink socket.

Using ipvs

```
import (
    "log"

    "github.com/moby/ipvs"
)

func main() {
    handle, err := ipvs.New("")
    if err != nil {
        log.Fatalf("ipvs.New: %s", err)
    }
    svcs, err := handle.GetServices()
    if err != nil {
        log.Fatalf("handle.GetServices: %s", err)
    }
}
```
