

## Example app with @skynexui/components

Next.js ships with [styled-jsx](#) allowing you to write scoped styled components with full CSS support. This is important for the modularity and code size of your bundles and also for the learning curve of the framework. If you know CSS you can write `styled-jsx` right away.

With [@skynexui/components](#) you will be allowed to use the advantages of `styled-jsx` in a component utility first approach to create your own UI with good and configurable defaults.

## Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

## How to use

Execute [create-next-app](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-skynexui-components with-skynexui-components-app
# or
yarn create next-app --example with-skynexui-components with-skynexui-components-app
# or
pnpm create next-app -- --example with-skynexui-components with-skynexui-components-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
