

Example projects

A selection of example projects to get started with.

Official examples

You can find some example projects in the [GitHub repository](#) under the `/examples` folder:

- [Next.js \(TypeScript version\)](#)
- [Create React App \(TypeScript version\)](#)
- [Remix](#)
- [Gatsby](#)
- [Preact](#)
- [CDN](#)
- [Plain server-side](#)
- [Tailwind CSS](#)
- [Vite.js](#)
- [Use styled-components as style engine \(TypeScript version\)](#)

Create React App is an awesome project for learning React. Have a look at [the alternatives available](#) to see which project best fits your needs.

The source code for this documentation site is also included in the repository. This is a slightly more complex project. Check out the `/docs` folder for build instructions.

More advanced example projects

If you want to start with a more complete and real-world example, you could take a look at the [premium themes & templates](#) or:

Free

- [GraphQL API and Relay Starter Kit](#):

-
- GraphQL API project using code-first design (TypeScript, OAuth, GraphQL.js, Knex, Cloud SQL)
- Web application project pre-configured with Webpack v5, TypeScript, React, Relay, Material UI
- Serverless deployment: `api` -> Cloud Functions, `web` -> Cloudflare Workers
- Client-side page routing/rendering at CDN edge locations, lazy loading
- Optimized for fast CI/CD builds and deployments using Yarn v2 monorepo design

- [React Most Wanted](#):

-
- Created with Create React App
- Custom Create React App script to start a new project with just a single CLI command
- Build for Firebase including Authentication using the official Firebase Web Auth UI
- Routing with React Router including error handling (404) and lazy loading
- All PWA features included (SW, Notifications, deferred installation prompt and more)

- Optimized and scalable performance (all ~100 points on Lighthouse)

Paid

- [ScaffoldHub](#):
 - Build your complete application with this online tool
 - Choose your framework and library (React & MUI!)
 - Choose your database (SQL, MongoDB or Firestore)
 - Model your database and application with the intuitive GUI
 - Generate your application, including a complete scaffolded backend
 - Preview your application online, and download the generated code
- [Divjoy](#):
 - Create your MUI app in minutes.
 - You'll get a nice template, authentication, database integration, subscription payments, and more.
