

crate_visibility_modifier

The tracking issue for this feature is: #53120

The `crate_visibility_modifier` feature allows the `crate` keyword to be used as a visibility modifier synonymous to `pub(crate)`, indicating that a type (function, *etc.*) is to be visible to the entire enclosing crate, but not to other crates.

```
#![feature(crate_visibility_modifier)]
```

```
crate struct Foo {  
    bar: usize,  
}
```
