example.js

This example illustrates how to filter the ContextModule results of import() statements. Only .js files that don't end in .noimport.js within the templates folder will be bundled.

```
_{{example.js}}_
```

templates/

- foo.js
- \bullet foo.noimport.js
- \bullet baz.js
- \bullet foo.noimport.js
- bar.js
- foo.noimport.js

All templates are of this pattern:

```
_{\{\text{templates/foo.js}\}}_{\underline{}}
```

dist/output.js

```
_{{dist/output.js}}_
```

Info

Unoptimized

```
_{{stdout}}_
```

Production mode

```
_{{production:stdout}}_
```
