## ElementHandle.screenshot() method

This method scrolls element into view if needed, and then uses <a href="Page.screenshot()">Page.screenshot()</a> to take a screenshot of the element. If the element is detached from DOM, the method throws an error.

## Signature:

```
screenshot(options?: {}): Promise<string | Buffer | void>;
```

## **Parameters**

Parameter	Туре	Description
options	{}	

## **Returns:**

Promise < string | Buffer | void>
