${\rm Home} > {\rm puppeteer} > {\rm Puppeteer}$ 

## Puppeteer class

The main Puppeteer class.

IMPORTANT: if you are using Puppeteer in a Node environment, you will get an instance of PuppeteerNode when you import or require puppeteer. That class extends Puppeteer, so has all the methods documented below as well as all that are defined on PuppeteerNode.

Signature:

export declare class Puppeteer

## Remarks

The constructor for this class is marked as internal. Third-party code should not call the constructor directly or create subclasses that extend the Puppeteer class.

## **Properties**

Property	Modifiers	Type	Description
_changedProduct		boolean	
$\_$ isPuppeteerCore		boolean	
devices		DevicesMap	
errors		PuppeteerErrors	
${\it network Conditions}$		PredefinedNetworkC	Conditions
