${\rm Home} > {\rm puppeteer} > {\rm ElementHandle} > {\rm screenshot}$

ElementHandle.screenshot() method

This method scrolls element into view if needed, and then uses Page.screenshot() to take a screenshot of the element. If the element is detached from DOM, the method throws an error.

Signature:

```
screenshot(options?: {}): Promise<string | Buffer | void>;
```

Parameters

Parameter	Type	Description
options	{}	

Returns:

 $Promise {<} string \mid Buffer \mid void {>}$
