A doc comment that is not attached to anything has been encountered.

Erroneous code example:

```
trait Island {
   fn lost();

/// I'm lost!
}
```

A little reminder: a doc comment has to be placed before the item it's supposed to document. So if you want to document the <code>Island</code> trait, you need to put a doc comment before it, not inside it. Same goes for the <code>lost</code> method: the doc comment needs to be before it:

```
/// I'm THE island!
trait Island {
    /// I'm lost!
    fn lost();
}
```
