Home > puppeteer > ElementHandle > type

## ElementHandle.type() method

Focuses the element, and then sends a keydown, keypress/input, and keyup event for each character in the text.

To press a special key, like Control or ArrowDown, use ElementHandle.press().

Signature:

```
type(text: string, options?: {
          delay: number;
}): Promise<void>;
```

## **Parameters**

| Parameter | Type               | Description |
|-----------|--------------------|-------------|
| text      | string             |             |
| options   | { delay: number; } |             |

Returns:

Promise<void>

## Example 1

```
await elementHandle.type('Hello'); // Types instantly
await elementHandle.type('World', {delay: 100}); // Types slower, like a user
```

## Example 2

An example of typing into a text field and then submitting the form:

```
const elementHandle = await page.$('input');
await elementHandle.type('some text');
await elementHandle.press('Enter');
```
