# **Dialog class**

Dialog instances are dispatched by the <a href="Page">Page</a> via the dialog event.

### Signature:

```
export declare class Dialog
```

## **Remarks**

The constructor for this class is marked as internal. Third-party code should not call the constructor directly or create subclasses that extend the Dialog class.

## **Example**

```
const puppeteer = require('puppeteer');

(async () => {
   const browser = await puppeteer.launch();
   const page = await browser.newPage();
   page.on('dialog', async dialog => {
      console.log(dialog.message());
      await dialog.dismiss();
      await browser.close();
   });
   page.evaluate(() => alert('1'));
})();
```

### **Methods**

Method	Modifiers	Description
accept(promptText)		
<u>defaultValue()</u>		
<u>dismiss()</u>		
message()		
<u>type()</u>
