# V4L2 poll()

```
System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\v41\[linux-master][Documentation][userspace-api][media][v41]func-poll.rst, line 2)

Unknown directive type "cnamespace".

.. c:namespace:: V4L
```

#### Name

v4l2-poll - Wait for some event on a file descriptor

## **Synopsis**

```
#include <sys/poll.h>
```

```
System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\v41\[linux-master][Documentation][userspace-api][media][v41]func-poll.rst, line 22)
Unknown directive type "c:function".
```

 $\dots$  c:function:: int poll( struct pollfd \*ufds, unsigned int nfds, int timeout )

## **Arguments**

## **Description**

With the :c:func:'poll()' function applications can suspend execution until the driver has captured data or is ready to accept data for output.

```
System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\v41\[linux-master][Documentation][userspace-api][media][v41]func-poll.rst, line 31); backlink
Unknown interpreted text role "c:func".
```

When streaming I/O has been negotiated this function waits until a buffer has been filled by the capture device and can be dequeued with the ref. VIDIOC\_DQBUF < VIDIOC\_QBUF > i ioctl. For output devices this function waits until the device is ready to accept a new buffer to be queued up with the ref. VIDIOC\_QBUF < VIDIOC\_QBUF > i ioctl for display. When buffers are already in the outgoing queue of the driver (capture) or the incoming queue isn't full (display) the function returns immediately.

```

On success c:finc:'poll()' returns the number of file descriptors that have been selected (that is, file descriptors for which the revents field of the respective struct pollfd structure is non-zero). Capture devices set the POLLIN and POLLRDNORM flags in the revents field, output devices the POLLOUT and POLLWRNORM flags. When the function timed out it returns a value of zero, on failure it returns -1 and the errno variable is set appropriately. When the application did not call ref: VIDIOC\_STREAMON <VIDIOC\_STREAMON \interpretation timed out it returns field. When the application has called ref: VIDIOC\_STREAMON <VIDIOC\_STREAMON \interpretation for a capture device but hasn't yet called

ref. VIDIOC\_QBUF < VIDIOC\_QBUF>`, the :c:func:`poll()` function succeeds and sets the POLLERR flag in the revents field. For output devices this same situation will cause :c:func:`poll()` to succeed as well, but it sets the POLLOUT and POLLWRNORM flags in the revents field.

If an event occurred (see ref. VIDIOC DQEVENT) then POLLPRI will be set in the revents field and refunction will return.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\v41\[linux-master] [Documentation] [userspace-api] [media] [v41] func-poll.rst, line 62); backlink

Unknown interpreted text role "c:func".

When use of the :c:func:`read()` function has been negotiated and the driver does not capture yet, the :c:func:`poll()` function starts capturing. When that fails it returns a POLLERR as above. Otherwise it waits until data has been captured and can be read. When the driver captures continuously (as opposed to, for example, still images) the function may return immediately.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\v41\[linux-master] [Documentation] [userspace-api] [media] [v41] func-poll.rst, line 66); backlink

Unknown interpreted text role "c:func".

If the caller is only interested in events (just POLLPRI is set in the events field), then :c:func:`poll()` will not start streaming if the driver does not stream yet. This makes it possible to just poll for events and not for buffers.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\v41\[linux-master] [Documentation] [userspace-api] [media] [v41] func-poll.rst, line 79); backlink

Unknown interpreted text role "c:func".

All drivers implementing the :c:func:'read()' or :c:func:'write()' function or streaming I/O must also support the :c:func:'poll()' function.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\v41\[linux-master][Documentation][userspace-api][media][v41]func-poll.rst, line 84); backlink

#### **Return Value**

On success, "c:func:'poll()' returns the number structures which have non-zero revents fields, or zero if the call timed out. On error -1 is returned, and the errno variable is set appropriately:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\userspace-api\media\v41\[linux-master] [Documentation] [userspace-api] [media] [v41] func-poll.rst, line 93); backlink

Unknown interpreted text role "c:func".

**EBADF** 

One or more of the ufds members specify an invalid file descriptor.

**EBUSY** 

The driver does not support multiple read or write streams and the device is already in use.

**EFAULT** 

ufds references an inaccessible memory area.

**EINTR** 

The call was interrupted by a signal.

**EINVAL** 

The nfds value exceeds the RLIMIT NOFILE value. Use getrlimit() to obtain this value.
