CVE-2019-9948: Avoid file reading by disallowing local-file:// and local_file:// URL schemes in URLopener().open() and URLopener().retrieve() of :mod:`urllib.request`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 7); backlink

Unknown interpreted text role "mod".

Prevent fold function used in email header encoding from entering infinite loop when there are too many non-ASCII characters in a header.

Updated blake2 implementation which uses secure memset implementation provided by platform.

Allow unpacking in the right hand side of annotated assignments. In particular, t: Tuple[int, ...] = x, y, *z is now allowed.

All structseq objects are now tracked by the garbage collector. Patch by Pablo Galindo.

Make the *co_argcount* attribute of code objects represent the total number of positional arguments (including positional-only arguments). The value of *co_posonlyargcount* can be used to distinguish which arguments are positional only, and the difference (*co_argcount - co_posonlyargcount*) is the number of positional-or-keyword arguments. Patch by Pablo Galindo.

Constructors of <code>:class:`int'</code>, <code>:class:`float'</code> and <code>:class:`complex'</code> will now use the <code>:meth:`~object.__index__</code>' special method, if available and the corresponding method <code>:meth:`~object.__int__</code>', <code>:meth:`~object.__float__</code>' or <code>:meth:`~object.__complex__</code>' is not available.

Unknown interpreted text role 'meth'.

Add native thread ID (TID) support to OpenBSD.

Implemented per opcode cache mechanism and LOAD_GLOBAL instruction use it. LOAD_GLOBAL is now about 40% faster. Contributed by Yury Selivanov, and Inada Naoki.

Fix crash in PyAST_FromNodeObject() when flags is NULL.

Freeing a great many small objects could take time quadratic in the number of arenas, due to using linear search to keep obmalloc.c's list of usable arenas sorted by order of number of free memory pools. This is accomplished without search now, leaving the worst-case time linear in the number of arenas. For programs where this quite visibly matters (typically with more than 100

thousand small objects alive simultaneously), this can greatly reduce the time needed to release their memory.

Fix possible overflow in wrap lenfunc() when sizeof(long) < sizeof(Py ssize t) (e.g., 64-bit Windows).

Improve the AST for "debug" f-strings, which use '=' to print out the source of the expression being evaluated. Delete expr_text from the FormattedValue node, and instead use a Constant string node (possibly merged with adjacent constant expressions inside the f-string).

The bytes.hex, bytearray.hex, and memoryview.hex methods as well as the binascii.hexlify and b2a_hex functions now have the ability to include an optional separator between hex bytes. This functionality was inspired by MicroPython's hexlify implementation.

Add:func:'os.memfd create'.

Unknown interpreted text role "c:func".

Only accept text after # type: ignore if the first character is ASCII. This is to disallow things like # type: ignore©.

Store text appearing after a #type: ignore comment in the AST. For example a type ignore like #type: ignore [E1000] will have the string "[E1000]" stored in its AST node.

Treat line continuation at EOF as a SyntaxError by Anthony Sottile.

Fix a crash when calling a C function with a keyword dict (f (**kwargs)) and changing the dict kwargs while that function is running.

Fix possible signed integer overflow when handling slices.

Add NamedExpression kind support to ast unparse.c

A :exc: SyntaxError` is now raised if a code blocks that will be optimized away (e.g. if conditions that are always false) contains syntax errors. Patch by Pablo Galindo.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 259); backlink

Unknown interpreted text role "exc".

Allow computation of modular inverses via three-argument pow: the second argument is now permitted to be negative in the case where the first and third arguments are relatively prime.

Update the Unicode database to version 12.1.0.

Avoid caching attributes of classes which type defines mro() to avoid a hard cache invalidation problem.

The FrameType stack is now correctly cleaned up if the execution ends with a return and the stack is not empty.

The <code>compile()</code> builtin functions now support the <code>ast.PyCF_ALLOW_TOP_LEVEL_AWAIT</code> flag, which allow to compile sources that contains top-level <code>await</code>, <code>async</code> with or <code>async</code> for. This is useful to evaluate async-code from with an already async functions; for example in a custom REPL.

Implement PEP 578, adding sys.audit, io.open code and related APIs.

Correct return type for UserList slicing operations. Patch by Michael Blahay, Erick Cervantes, and vaultah

Move PyRuntimeState.warnings into per-interpreter state (via "module state").

Removed __str__ implementations from builtin types :class:'bool', :class:'int', :class:'float', :class:'complex' and few classes from the standard library. They now inherit __str__ () from :class:'object'.

Unknown interpreted text role "class".

Add a = feature f-strings for debugging. This can precede !s, !r, or !a. It produces the text of the expression, followed by an equal sign, followed by the repr of the value of the expression. So f'{3*9+15=}' would be equal to the string '3*9+15=42'. If = is specified, the default conversion is set to !r, unless a format spec is given, in which case the formatting behavior is unchanged, and format will be used.

Save the live exception during import.c's remove_module().

pymalloc returns memory blocks aligned by 16 bytes, instead of 8 bytes, on 64-bit platforms to conform x86-64 ABI. Recent compilers assume this alignment more often. Patch by Inada Naoki.

A long-since-meaningless check for getpid() == main_pid was removed from Python's internal C signal handler.

Fix incorrect use of %p in format strings. Patch by Zackery Spytz.

builtins.help() now prefixes async for async functions

Add native thread ID (TID) to threading Thread objects (supported platforms: Windows, FreeBSD, Linux, macOS)

Added fix for broken symlinks in combination with pathlib

Added new trashcan macros to deal with a double deallocation that could occur when the *tp_dealloc* of a subclass calls the *tp_dealloc* of a base class and that base class uses the trashcan mechanism. Patch by Jeroen Demeyer.

Do not clear :data: sys.flags and :data: sys.float info during shutdown. Patch by Zackery Spytz.

Unknown interpreted text role "class".

Added validation of integer prefixes to the construction of IP networks and interfaces in the ipaddress module.

Add an extend action to argparser.

Fix a bug making a SharedMemoryManager instance and its parent process use two separate resource_tracker processes.

Adds a grammar to lib2to3.pygram that contains exec as a function not as statement.

The function time.clock() was deprecated in 3.3 in favor of time.perf_counter() and marked for removal in 3.8, it has removed.

Fix asyncio discarding IPv6 scopes when ensuring hostname resolutions internally

Add new function: 'math.isqrt' to compute integer square roots.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 1007); backlink

Unknown interpreted text role "func".

Introduce the importlib.metadata module with (provisional) support for reading metadata from third-party packages.

When using *type_comments=True* in *ast.parse*, treat # type: ignore followed by a non-alphanumeric character and then arbitrary text as a type ignore, instead of requiring nothing but whitespace or another comment. This is to permit formations such as # type: ignore [E1000].

cp65001 encoding (Windows code page 65001) becomes an alias to utf 8 encoding.

The multiprocessing.resource_tracker replaces the multiprocessing.semaphore_tracker module. Other than semaphores, resource_tracker also tracks shared_memory segments.

The Cache and Statement objects of the mod: sglite3' module are not exposed to the user. Patch by Aviv Palivoda.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 1059); backlink

Unknown interpreted text role "mod".

In *shutil.copystat()*, first copy extended file attributes and then file permissions, since extended attributes can only be set on the destination while it is still writeable.

Add new :func:`sys.unraisablehook` function which can be overridden to control how "unraisable exceptions" are handled. It is called when an exception has occurred but there is no way for Python to handle it. For example, when a destructor raises an exception or during garbage collection (:func:`gc.collect`).

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 1080); backlink

Unknown interpreted text role "func".

Unknown interpreted text role "meth".

Added support for ZIP files with disks set to 0. Such files are commonly created by builtin tools on Windows when use ZIP64 extension. Patch by Francisco Facioni.

trace.py can now run modules via python3 -m trace -t --module module_name

Changed :func:`unittest.mock.patch.dict` to return the patched dictionary when used as context manager. Patch by Vadim Tsander.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 1563); backlink

Unknown interpreted text role "func".

Added a __copy__() to collections. UserList and collections. UserDict in order to correctly implement shallow copying of the objects. Patch by Bar Harel.

_thread.interrupt_main() now avoids setting the Python error status if the SIGINT signal is ignored or not handled by Python.

Clarify that some types have unstable constructor signature between Python versions.

Improve documentation of the stdin, stdout, and stderr arguments of the asyncio.subprocess_exec function to specify which values are supported. Also mention that decoding as text is not supported.

Add a few tests to verify that the various values passed to the std* arguments actually work.

Improve version added references in typing module - by Anthony Sottile.

What's new now mentions SSLContext.hostname checks common name instead of SSLContext.host flags.

Add a note to the curses.addstr() documentation to warn that multiline strings can cause segfaults because of an neurses bug.

Added C API Documentation for Time_FromTimeAndFold and PyDateTime_FromDateAndTimeAndFold as per PEP 495. Patch by Edison Abahurire.

More of the legacy distutils documentation has been either pruned, or else more clearly marked as being retained solely until the setuptools documentation covers it independently.

Add detail to the documentation on the pty.spawn function.

Remove deprecation and document urllib.parse.unwrap(). Patch contributed by Rémi Lapeyre.

Added the context variable in glossary.

Clarify that *copy()* is not part of the *MutableSequence* ABC.

Make codecs. StreamRecoder. writelines take a list of bytes.

Added documentation for func factorial to indicate that returns integer values

Expand object. __doc__ (docstring) to make it clearer. Modify pydoc.py so that help(object) lists object methods (for other classes, help omits methods of the object base class.)

Modify test_coroutines, test_cprofile, test_generators, test_raise, test_ssl and test_yield_from to use :fine:`test.support.catch_unraisable_exception` rather than :fine:`test.support.captured_stderr`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 1746); backlink

Unknown interpreted text role "func".

Fix test memfd create on older Linux Kernels.

Test with OpenSSL 1.1.1c

Add: func: test.support.catch unraisable exception: context manager catching unraisable exception using: func: sys.unraisablehook.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 1775); backlink

Unknown interpreted text role "func".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 1775); backlink

Unknown interpreted text role "func".

The main regrest process now always removes all temporary directories of worker processes even if they crash or if they are killed on KeyboardInterrupt (CTRL+c).

"python3 -m test -jN ..." now continues the execution of next tests when a worker process crash (CHILD_ERROR state). Previously, the test suite stopped immediately. Use --failfast to stop at the first error.

Update Lib/test/selfsigned pythontestdotnet.pem to match self-signed.pythontest.net's new TLS certificate.

Skip httplib and nntplib networking tests when they would otherwise fail due to a modern OS or distro with a default OpenSSL policy of rejecting connections to servers with weak certificates.

Add tests for several C API functions in the "mod:'datetime' module. Patch by Edison Abahurire.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 1828); backlink

Unknown interpreted text role "mod".

Fix test multiprocessing in test venv if platform lacks functioning sem open.

To embed Python into an application, a new --embed option must be passed to python3-config --libs --embed to get -lpython3.8 (link the application to libpython). To support both 3.8 and older, try python3-config --libs --embed first and fallback to python3-config --libs (without --embed) if the previous command fails.

Add a pkg-config python-3.8-embed module to embed Python into an application: pkg-config python-3.8-embed --libs includes -lpython3.8. To support both 3.8 and older, try pkg-config python-X.Y-embed --libs first and fallback to pkg-config python-X.Y --libs (without --embed) if the previous command fails (replace X.Y with the Python version).

On the other hand, pkg-config python3.8 --libs no longer contains -lpython3.8. C extensions must not be linked to libpython (except on Android, case handled by the script); this change is backward incompatible on purpose.

"make install" now runs compileall in parallel.

include of STATUS_CONTROL_C_EXIT without depending on MSC compiler

Update to OpenSSL 1.1.1b for Windows.

Add Windows support for UDP transports for the Proactor Event Loop. Patch by Adam Meily.

The :c:macro: Py_DEPRECATED()' macro has been implemented for MSVC.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 1910); backlink

Unknown interpreted text role "c:macro".

Support building Python on macOS without /usr/include installed. As of macOS 10.14, system header files are only available within an SDK provided by either the Command Line Tools or the Xcode app.

Replace now redundant .context_use_ps1 with .prompt_last_line. This finishes change started in bpo-31858.

Make idlelib.run runnable; add test clause.

Print any argument other than None or int passed to SystemExit or sys.exit().

When saving a file, call os.fsync() so bits are flushed to e.g. USB drive.

In browser.py, remove extraneous sorting by line number since dictionary was created in line number order.

Handle strings like u"bar" correctly in Tools/parser/unparse.py. Patch by Chih-Hsuan Yen.

Implement the PEP 587 "Python Initialization Configuration".

Fix crashes when attempting to use the *modulo* parameter when ipow is implemented in C.

Update :c:finc:`PyObject_CallMethodObjArgs` and _PyObject_CallMethodIdObjArgs to use _PyObject_GetMethod to avoid creating a bound method object in many cases. Patch by Michael J. Sullivan.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 2007); backlink

Unknown interpreted text role "c:func".

Implement PEP 590: Vectorcall: a fast calling protocol for CPython. This is a new protocol to optimize calls of custom callable objects.

 $\label{eq:py_main()} \textit{py_Main()} \textit{ now returns the exitcode rather than calling} \textit{Py_Exit(exitcode)} \textit{ when calling} \textit{PyErr_Print()} \textit{ if the current exception type is} \textit{SystemExit.}$

Add new type flag Py_TPFLAGS_METHOD_DESCRIPTOR for objects behaving like unbound methods. These are objects supporting the optimization given by the LOAD_METHOD/CALL_METHOD opcodes. See PEP 590.

The x:func: PyEval_ReInitThreads` function has been removed from the C API. It should not be called explicitly: use x:func: PyOS_AfterFork_Child` instead.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Misc\NEWS.d\[cpython-main] [Misc] [NEWS.d]3.8.0b1.rst, line 2050); backlink
