Unknown directive type "module".

.. module:: quopri
 :synopsis: Encode and decode files using the MIME quoted-printable encoding.

Source code: :source:`Lib/quopri.py`

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] quopri.rst, line 7); backlink

Unknown interpreted text role "source".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] quopri.rst, line 9)

Unknown directive type "index".

```
.. index::
   pair: quoted-printable; encoding
   single: MIME; quoted-printable encoding
```

This module performs quoted-printable transport encoding and decoding, as defined in RFC 1521: "MIME (Multipurpose Internet Mail Extensions) Part One: Mechanisms for Specifying and Describing the Format of Internet Message Bodies". The quoted-printable encoding is designed for data where there are relatively few nonprintable characters; the base64 encoding scheme available via the mod: base64" module is more compact if there are many such characters, as when sending a graphics file.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] quopri.rst, line 15); backlink

Unknown interpreted text role 'mod'.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] quopri.rst, line 23)

Unknown directive type "function".

.. function:: decode(input, output, header=False)

Decode the contents of the *input* file and write the resulting decoded binary data to the *output* file. *input* and *output* must be :term:`binary file objects <file object>`. If the optional argument *header* is present and true, underscore will be decoded as space. This is used to decode "Q"-encoded headers as described in :rfc:`1522`: "MIME (Multipurpose Internet Mail Extensions)
Part Two: Message Header Extensions for Non-ASCII Text".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] quopri.rst, line 33)

Unknown directive type "function".

.. function:: encode(input, output, quotetabs, header=False)

Encode the contents of the *input* file and write the resulting quoted-printable data to the *output* file. *input* and *output* must be :term:`binary file objects <file object>`. *quotetabs*, a non-optional flag which controls whether to encode embedded spaces and tabs; when true it encodes such embedded whitespace, and when false it leaves them unencoded.

Note that spaces and tabs appearing at the end of lines are always encoded, as per :rfc:`1521`. *header* is a flag which controls if spaces are encoded as underscores as per :rfc:`1522`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] quopri.rst, line 46)

Unknown directive type "function".

.. function:: decodestring(s, header=False)

Like :func:`decode`, except that it accepts a source :class:`bytes` and returns the corresponding decoded :class:`bytes`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] quopri.rst, line 52)

Unknown directive type "function".

.. function:: encodestring(s, quotetabs=False, header=False)

Like :func:`encode`, except that it accepts a source :class:`bytes` and returns the corresponding encoded :class:`bytes`. By default, it sends a ``False`` value to *quotetabs* parameter of the :func:`encode` function.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] quopri.rst, line 60)

Unknown directive type "seealso".
