## Linnerrud dataset

## **Data Set Characteristics:**

Number of Instances: 20 Number of Attributes: 3 Missing Attribute Values: None

The Linnerud dataset is a multi-output regression dataset. It consists of three exercise (data) and three physiological (target) variables collected from twenty middle-aged men in a fitness club:

- *physiological* CSV containing 20 observations on 3 physiological variables: Weight, Waist and Pulse.
- exercise CSV containing 20 observations on 3 exercise variables: Chins, Situps and Jumps.
