ElementHandle.type() method

Focuses the element, and then sends a keydown, keypress / input, and keyup event for each character in the text.

To press a special key, like Control or ArrowDown , use ElementHandle.press().

Signature:

```
type(text: string, options?: {
    delay: number;
}): Promise<void>;
```

Parameters

Parameter	Туре	Description
text	string	
options	{ delay: number; }	

Returns:

Promise < void >

Example 1

```
await elementHandle.type('Hello'); // Types instantly
await elementHandle.type('World', {delay: 100}); // Types slower, like a user
```

Example 2

An example of typing into a text field and then submitting the form:

```
const elementHandle = await page.$('input');
await elementHandle.type('some text');
await elementHandle.press('Enter');
```
