Source code: :source:`Lib/asyncio/runners.py`

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] asyncio-runner.rst, line 8); backlink

Unknown interpreted text role "source".

This section outlines high-level asyncio primitives to run asyncio code.

They are built on top of an ref. event loop <asyncio-event-loop>` with the aim to simplify async code usage for common wide-spread scenarios.

 $System\,Message: ERROR/3~(\texttt{D:\nonboarding-resources}\spaces) a simple-onboarding-resources \copython-main\coc\library\copython-main\cite[Doc]\cite[Library]\space] a syncio-runner.rst, line 13); backlink$

Running an asyncio Program

.. versionchanged:: 3.10

```
System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-
main\Doc\library\[cpython-main] [Doc] [library]asyncio-runner.rst, line 25)
Unknown directive type "function".
   .. function:: run(coro, *, debug=None)
      Execute the :term:`coroutine` *coro* and return the result.
      This function runs the passed coroutine, taking care of
      managing the asyncio event loop, *finalizing asynchronous
      generators*, and closing the threadpool.
      This function cannot be called when another asyncio event loop is
      running in the same thread.
      If *debug* is ``True``, the event loop will be run in debug mode. ``False`` disables debug mode explicitly. ``None`` is used to respect the global
      :ref:`asyncio-debug-mode` settings.
      This function always creates a new event loop and closes it at
      the end. It should be used as a main entry point for asyncio
      programs, and should ideally only be called once.
      Example::
           async def main():
               await asyncio.sleep(1)
               print('hello')
           asyncio.run(main())
       .. versionadded:: 3.7
       .. versionchanged:: 3.9
          Updated to use :meth: `loop.shutdown default executor`.
```

```
*debug* is ``None`` by default to respect the global debug mode settings.
```

Runner context manager

A context manager that simplifies *multiple* async function calls in the same context.

Sometimes several top-level async functions should be called in the same ref; event loop <asyncio-event-loop>` and :class:`contextvars.Context`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] asyncio-runner.rst, line 70); backlink

Unknown interpreted text role 'ref'.

 $System\,Message: ERROR/3~(\texttt{D:\nonboarding-resources}\scample-onboarding-resources\\\colored control c$

Unknown interpreted text role "class".

If *debug* is True, the event loop will be run in debug mode. False disables debug mode explicitly. None is used to respect the global ref asyncio-debug-mode settings.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main][Doc][library]asyncio-runner.rst, line 73); backlink
Unknown interpreted text role "ref".

loop factory could be used for overriding the loop creation. :func: asyncio.new event loop is used if None.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] asyncio-runner.rst, line 77); backlink
Unknown interpreted text role "func".

Basically, :func: asyncio.run() example can be rewritten with the runner usage:

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library]asyncio-runner.rst, line 80); backlink

Unknown interpreted text role "func".

```
async def main():
    await asyncio.sleep(1)
    print('hello')

with asyncio.Runner() as runner:
    runner.run(main())
```

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library]asyncio-runner.rst, line 89)

Unknown directive type "versionadded".

```
.. versionadded:: 3.11
```

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main][Doc] [library]asyncio-runner.rst, line 91)

Unknown directive type "method".

```
.. method:: run(coro, *, context=None)
Run a :term:`coroutine <coroutine>` *coro* in the embedded loop.
Return the coroutine's result or raise its exception.
```

An optional keyword-only *context* argument allows specifying a custom :class:`contextvars.Context` for the *coro* to run in. The runner's default context is used if ``None``.

This function cannot be called when another asyncio event loop is running in the same thread.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library]asyncio-runner.rst, line 104)

Unknown directive type "method".

.. method:: close()

Close the runner.

Finalize asynchronous generators, shutdown default executor, close the event loop and release embedded :class:`contextvars.Context`.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main][Doc][library]asyncio-runner.rst, line 111)

Unknown directive type "method".

.. method:: get_loop()

Return the event loop associated with the runner instance.

Note

:class: Runner' uses the lazy initialization strategy, its constructor doesn't initialize underlying low-level structures.

Handling Keyboard Interruption

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main][Doc][library]asyncio-runner.rst, line 127)

Unknown directive type "versionadded".

When :const: signal.SIGINT' is raised by :kbd: Ctrl-C', :exc: KeyboardInterrupt' exception is raised in the main thread by default. However this doesn't work with :mod: asyncio because it can interrupt asyncio internals and can hang the program from exiting.

 $System\,Message: ERROR/3~(\texttt{D:\onboarding-resources\scample-onboarding-resources\cpython-main\Doc\library\[cpython-main\][Doc\][library\]asyncio-runner.rst, line~129); \\ \textit{backlink} \\$

Unknown interpreted text role "const".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main][Doc][library]asyncio-runner.rst, line 129); backlink

 $System\,Message:\,ERROR/3\, (\mbox{D:\nonboarding-resources}\xspace) a syncio-runner.\,rst, \mbox{line}\,\,129); \mbox{\it backlink} \xspace$

Unknown interpreted text role "exc".

 $System\,Message: ERROR/3~(\texttt{D:\onboarding-resources\scample-onboarding-resources\cpython-main\Doc\library\[cpython-main\][Doc\][library\]asyncio-runner.rst, line~129); \\ \textit{backlink} \\$

Unknown interpreted text role "mod".

To mitigate this issue, "mod: asyncio" handles :const: signal.SIGINT" as follows:

 $System\,Message: ERROR/3~(\texttt{D:}\onboarding-resources}\cpython-main\Doc\library\[cpython-main\] [Doc]~[library\] asyncio-runner.rst, line~134); \\ \textit{backlink}$

Unknown interpreted text role "mod".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library]asyncio-runner.rst, line 134); backlink

Unknown interpreted text role "const".

1. meth: asyncio.Runner.run installs a custom const: signal.SIGINT handler before any user code is executed and removes it when exiting from the function.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] asynciorunner.rst, line 136); backlink

Unknown interpreted text role "meth".

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] asynciorunner.rst, line 136); backlink

Unknown interpreted text role "const".

2. The :class:`~asyncio.Runner` creates the main task for the passed coroutine for its execution.

System Message: ERROR/3 (D:\onboarding-resources\sample-onboarding-resources\cpython-main\Doc\library\[cpython-main] [Doc] [library] asynciorunner.rst, line 138); backlink

Unknown interpreted text role "class".

3. When <code>const:</code> signal.SIGINT is raised by <code>kbd:</code> Ctrl-C', the custom signal handler cancels the main task by calling <code>meth:</code> asyncio.Task.cancel which raises <code>:exc:</code> asyncio.CancelledError inside the the main task. This causes the Python stack to unwind, <code>try/except</code> and <code>try/finally</code> blocks can be used for resource cleanup. After the main task is cancelled, <code>:meth:</code> asyncio.Runner.run raises <code>:exc:</code> KeyboardInterrupt.
