CliHelloWorldLazy

This test checks bundle sizes when there is a lazy module. It also checks if the <code>ngDevMode</code> global variable and string references in <code>packages/core/src/util/ng_dev_mode.ts</code> are correctly removed.

This test contains a lazy route to ensure <code>ngDevMode</code> removal happens even across chunks, and a payload size check in <code>/goldens/size-tracking/integration-payloads.json</code> to ensure extra code is not retained accidentally.
