Font Awesome receives dozens of new requests every day. Some of them will eventually be included, others will not. Our <u>Icon Leaderboard</u> contains a lot of information on how requests work, please take a look.

Said so, if you need a new icon in a short while, or you need a comprehensive set of icons (e.g., a set of weather icons to build a forecast application) our suggestion is to customize Font Awesome.

## Webfont

There are some wonderful online services which allows you to customize Font Awesome, like:

- Fontello: http://fontello.com/
- IcoMoon: <a href="https://icomoon.io/app/#/select">https://icomoon.io/app/#/select</a> (How To)
- Fontastic: <a href="http://fontastic.me/">http://fontastic.me/</a>

Pick up the one which better fits your needs.

### **SVG Framework**

Official SVG customization is on the To-Do list, meanwhile please use this approach.

Prerequisites:

1. Single-path SVG of the icon you want to add

In the following examples, I'm going to add to Font Awesome 5 the fa-list icon from Font Awesome 4.

#### With local/CDN fontawesome/all.js

Pseudoelements will not work with this method!

#### JavaScript:

```
// replace 1568, 1568 with your SVG viewbox
 // e001 is the unicode point which represents this custom icon. Increment this value
for other icons
// replace 'M256...' with your single-path SVG
var faListOldStyle = {
         prefix: 'fac',
         iconName: 'list-old-style',
         icon: [1568, 1568, [], 'e001', 'M256 1312v192q0 13-9.5 22.5t-22.5 9.5h-192q-13 0-

```

```
FontAwesome.library.add(
  faListOldStyle
)
```

HTML:

```
<span class="fac fa-list-old-style"></span>
```

Example: https://jsfiddle.net/tagliala/we7gtcvk/1/

#### With Webpack

Note: Instructions are different for TypeScript (you can see an example here)

JavaScript:

```
import { library, dom } from '@fortawesome/fontawesome-svg-core'
// replace 1568, 1568 with your SVG viewbox
// e001 is the unicode point which represents this custom icon. Increment this value
for other icons
// replace 'M256...' with your single-path SVG
var faListOldStyle = {
     prefix: 'fas',
      iconName: 'list-old-style',
       icon: [1568, 1568, [], 'e001', 'M256 1312v192q0 13-9.5 22.5t-22.5 9.5h-192q-13 0-
22.5-9.5t-9.5-22.5v-192q0-13 9.5-22.5t22.5-9.5h192q13 0 22.5 9.5t9.5 22.5zm0-

# **New styles**

If you don't need new icons but have special needs for your stylesheet, please consider a custom build based on .less or .scss versions.
