A yield clause was used in an async context.

Erroneous code example:

```
#![feature(generators)]

fn main() {
    let generator = || {
        async {
            yield;
        }
    };
}
```

Here, the <code>yield</code> keyword is used in an <code>async</code> block, which is not yet supported.

To fix this error, you have to move <code>yield</code> out of the <code>async</code> block:

```
#![feature(generators)]

fn main() {
    let generator = || {
        yield;
    };
}
```
