## **Response Headers**

## Use a Response parameter

You can declare a parameter of type Response in your path operation function (as you can do for cookies).

And then you can set headers in that temporal response object.

```
{!../../docs_src/response_headers/tutorial002.py!}
```

And then you can return any object you need, as you normally would (a dict, a database model, etc).

And if you declared a response model, it will still be used to filter and convert the object you returned.

**FastAPI** will use that *temporal* response to extract the headers (also cookies and status code), and will put them in the final response that contains the value you returned, filtered by any response model.

You can also declare the Response parameter in dependencies, and set headers (and cookies) in them.

## Return a Response directly

You can also add headers when you return a Response directly.

Create a response as described in <u>Return a Response Directly</u>{.internal-link target=\_blank} and pass the headers as an additional parameter:

```
{!../../docs_src/response_headers/tutorial001.py!}
```

!!! note "Technical Details" You could also use from starlette.responses import Response or from starlette.responses import JSONResponse.

```
**FastAPI** provides the same `starlette.responses` as `fastapi.responses` just as a convenience for you, the developer. But most of the available responses come directly from Starlette.

And as the `Response` can be used frequently to set headers and cookies, **FastAPI** also provides it at `fastapi.Response`.
```

## **Custom Headers**

Have in mind that custom proprietary headers can be added using the 'X-' prefix.

But if you have custom headers that you want a client in a browser to be able to see, you need to add them to your CORS configurations (read more in <a href="CORS (Cross-Origin Resource Sharing">CORS (Cross-Origin Resource Sharing)</a>{.internal-link target=\_blank}), using the parameter <a href="expose headers">expose headers</a> documented in <a href="Starlette's CORS docs">Starlette's CORS docs</a>.
