Built-in transition

You can use Element's built-in transitions directly. Before that, please read the transition docs.

fade

:::demo We have two fading effects: el-fade-in-linear and el-fade-in.

```
<template>
 <div>
   <el-button @click="show = !show">Click Me</el-button>
   <div style="display: flex; margin-top: 20px; height: 100px;">
     <transition name="el-fade-in-linear">
       <div v-show="show" class="transition-box">.el-fade-in-linear</div>
     </transition>
     <transition name="el-fade-in">
        <div v-show="show" class="transition-box">.el-fade-in</div>
     </transition>
   </div>
  </div>
</template>
<script>
   export default {
   data: () => ({
     show: true
   })
 }
</script>
<style>
 .transition-box {
   margin-bottom: 10px;
   width: 200px;
   height: 100px;
   border-radius: 4px;
   background-color: #409EFF;
   text-align: center;
   color: #fff;
   padding: 40px 20px;
   box-sizing: border-box;
   margin-right: 20px;
 }
</style>
```

:::

zoom

```
:::demo el-zoom-in-center, el-zoom-in-top and el-zoom-in-bottom are provided.
```

```
<template>
 <div>
   <el-button @click="show2 = !show2">Click Me</el-button>
   <div style="display: flex; margin-top: 20px; height: 100px;">
     <transition name="el-zoom-in-center">
       <div v-show="show2" class="transition-box">.el-zoom-in-center</div>
      </transition>
     <transition name="el-zoom-in-top">
       <div v-show="show2" class="transition-box">.el-zoom-in-top</div>
      </transition>
     <transition name="el-zoom-in-bottom">
       <div v-show="show2" class="transition-box">.el-zoom-in-bottom</div>
     </transition>
   </div>
  </div>
</template>
<script>
   export default {
   data: () => ({
     show2: true
   })
</script>
<style>
 .transition-box {
  margin-bottom: 10px;
   width: 200px;
   height: 100px;
   border-radius: 4px;
   background-color: #409EFF;
   text-align: center;
   color: #fff;
   padding: 40px 20px;
   box-sizing: border-box;
   margin-right: 20px;
 }
</style>
```

:::

collapse

For collapse effect, use the el-collapse-transition component.

:::demo

```
<template>
 <div>
   <el-button @click="show3 = !show3">Click Me</el-button>
   <div style="margin-top: 20px; height: 200px;">
     <el-collapse-transition>
       <div v-show="show3">
         <div class="transition-box">el-collapse-transition</div>
         <div class="transition-box">el-collapse-transition</div>
       </div>
     </el-collapse-transition>
   </div>
  </div>
</template>
<script>
  export default {
   data: () => ({
     show3: true
   })
 }
</script>
<style>
 .transition-box {
   margin-bottom: 10px;
   width: 200px;
   height: 100px;
   border-radius: 4px;
   background-color: #409EFF;
   text-align: center;
   color: #fff;
   padding: 40px 20px;
   box-sizing: border-box;
   margin-right: 20px;
</style>
```

:::

On demand

```
// fade/zoom
import 'element-ui/lib/theme-chalk/base.css';
// collapse
import CollapseTransition from 'element-ui/lib/transitions/collapse-transition';
import Vue from 'vue'

Vue.component(CollapseTransition.name, CollapseTransition)
```
