## WebWorker.evaluate() method

If the function passed to the worker.evaluate returns a Promise, then worker.evaluate would wait for the promise to resolve and return its value. If the function passed to the worker.evaluate returns a non-serializable value, then worker.evaluate resolves to undefined . DevTools Protocol also supports transferring some additional values that are not serializable by JSON: -0, NaN, Infinity, -Infinity, and bigint literals. Shortcut for await worker.executionContext()).evaluate(pageFunction, ...args).

## Signature:

```
evaluate<ReturnType extends any>(pageFunction: Function | string, ...args: any[]):
Promise<ReturnType>;
```

## **Parameters**

Parameter	Туре	Description
pageFunction	Function   string	Function to be evaluated in the worker context.
args	any[]	Arguments to pass to pageFunction.

## **Returns:**

Promise < ReturnType >

Promise which resolves to the return value of <code>pageFunction</code> .
