A file wasn't found for an out-of-line module.

Erroneous code example:

```
mod file_that_doesnt_exist; // error: file not found for module
```

fn main() {}

Please be sure that a file corresponding to the module exists. If you want to use a module named file_that_doesnt_exist, you need to have a file named file_that_doesnt_exist.rs or file_that_doesnt_exist/mod.rs in the same directory.
