Dev Live Reload package

This live reloads the Atom .less files. You edit styles and they are magically reflected in any running Atom windows. Magic! :tophat: :sparkles: :rabbit2:

Installed by default on Atom windows running in dev mode. Use the "Application: Open Dev" command to open a new dev mode window.

Use meta-shift-ctrl-r to reload all core and package stylesheets.

This package is **experimental**, it does not handle the following:

• File additions to a theme. New files will not be watched.

```
ui-variables.less - /Users/ben/github/atom-dark-ui
atom-dark-ui
                                  ui-variables.less
