## **Quobyte API Clients**

```
Get the quobyte api client
go get github.com/quobyte/api
Usage
package main
import (
  "log"
  quobyte_api "github.com/quobyte/api"
)
func main() {
    client := quobyte_api.NewQuobyteClient("http://apiserver:7860", "user", "password")
    client.SetAPIRetryPolicy(quobyte_api.RetryInfinitely) // Default quobyte_api.RetryInter
    req := &quobyte_api.CreateVolumeRequest{
        Name:
                            "MyVolume",
                            "root",
        RootUserID:
        RootGroupID:
                            "root",
        {\tt ConfigurationName: "BASE"},\\
        Labels: []quobyte_api.Label{
            {Name: "label1", Value: "value1"},
            {Name: "label2", Value: "value2"},
        },
    }
    volumeUUID, err := client.CreateVolume(req)
    if err != nil {
        log.Fatalf("Error:", err)
    }
    log.Printf("%s", volumeUUID)
}
```
