# Keyboard.sendCharacter() method

Dispatches a `keypress` and `input` event. This does not send a `keydown` or `keyup` event.

**Signature:**

```
sendCharacter(char: string): Promise<void>;
```

## Parameters

| Parameter | Type | Description |
|-----------|------|-------------|
| char | string | Character to send into the page. |

**Returns:**

Promise<void>

## Remarks

Modifier keys DO NOT effect [Keyboard.sendCharacter](#). Holding down `Shift` will not type the text in upper case.

## Example

```
page.keyboard.sendCharacter('嗨');
```
