[Starters](#) are boilerplate Gatsby sites maintained officially, or by the community.

Prerequisites

- The [Gatsby CLI](#) installed

Directions

1. Find the starter you'd like to use. (*The [Starter Library](#) is a good place to look!*)

2. Generate a new site based on the starter. In the terminal, run:

```
gatsby new {your-project-name} {link-to-starter}
```

Don't run the above command as-is -- remember to replace {your-project-name} and {link-to-starter}!

3. Run your new site:

```
cd {your-project-name}
gatsby develop
```

Additional resources

- Follow a [more detailed guide](#) on using Gatsby starters.
- Learn how to use the [Gatsby CLI](#) tool to use starters in [tutorial part one](#)
