Circular structure in "getInitialProps" result

Why This Error Occurred `getInitialProps` is serialized to JSON using `JSON.stringify` and sent to the client side for hydrating the page.

However, the result returned from `getInitialProps` can't be serialized when it has a circular structure.

Possible Ways to Fix It Circular structures are not supported, so the way to fix this error is removing the circular structure from the object that is returned from `getInitialProps`.
