cluster-bootstrap

Set of constants and helpers in support of https://github.com/kubernetes/community/blob/master/contributors/proposals/cluster-lifecycle/bootstrap-discovery.md

Purpose

Current user is kubeadm, the controller that cleans up the tokens, and the bootstrap authenticator.

Where does it come from?

`cluster-bootstrap` is synced from https://github.com/kubernetes/kubernetes/blob/master/staging/src/k8s.io/bootstrap. Code changes are made in that location, merged into `k8s.io/kubernetes` and later synced here.

Things you should *NOT* do

1. Add API types to this repo. This is for the helpers, not for the types.
2. Directly modify any files under `token` in this repo. Those are driven from `k8s.io/kubernetes/staging/src/k8s.io/cluster-bootstrap`.
