Distributed Replicated Block Device - DRBD

Description

DRBD is a shared-nothing, synchronously replicated block device. It is designed to serve as a building block for high availability clusters and in this context, is a "drop-in" replacement for shared storage. Simplistically, you could see it as a network RAID 1.

Please visit https://www.drbd.org to find out more.

System Message: ERROR/3 (`D:\onboarding-resources\sample-onboarding-resources\linux-master\Documentation\admin-guide\blockdev\drbd\(linux-master)(Documentation)(admin-guide)(blockdev)(drbd)index.rst`, **line 15**)
