Bridge Method Injector Opportunities

Where might we use the [Bridge Method Injector](#) in Guava?

We're not yet sure whether we want to use it at all, but part of making that decision will be having a list of possible uses in front of us.

Note that any of these changes might introduce source incompatibilities (e.g., for people who call `ImmutableSet.of(immediateFuture(...)))` .

- `Iterables.(various)` -> `FluentIterable`
- `ImmutableMultiset.elementSet` -> `ImmutableSet`
- `Iterators.forArray, singletonIterator` -> `UnmodifiableListIterator`
- `Splitter.split` -> `List` (or `FluentIterable` if we could depend on `collect` from `base`)
- `Sets.filter` (etc.) -> `SetView`
- `Futures.immediate*Future` -> `ListenableScheduledFuture` ?
