Ansible 2.9 Porting Guide

This section discusses the behavioral changes between Ansible 2.8 and Ansible 2.9.

It is intended to assist in updating your playbooks, plugins and other parts of your Ansible infrastructure so they will work with this version of Ansible.

We suggest you read this page along with Ansible Changelog for 2.9 to understand what updates you may need to make.

This document is part of a collection on porting. The complete list of porting guides can be found at :ref:`porting guides <porting_guides>`.

> **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst`, **line 14);** *backlink*

Topics

Playbook

Inventory

- `hash_behaviour` now affects inventory sources. If you have it set to `merge`, the data you get from inventory might change and you will have to update playbooks accordingly. If you're using the default setting (`overwrite`), you will see no changes. Inventory was ignoring this setting.

Loops

Ansible 2.9 handles "unsafe" data more robustly, ensuring that data marked "unsafe" is not templated. In previous versions, Ansible recursively marked all data returned by the direct use of `lookup()` as "unsafe", but only marked structured data returned by indirect lookups using `with_X` style loops as "unsafe" if the returned elements were strings. Ansible 2.9 treats these two approaches consistently.

As a result, if you use `with_dict` to return keys with templatable values, your templates may no longer work as expected in Ansible 2.9.

To allow the old behavior, switch from using `with_X` to using `loop` with a filter as described at :ref:`migrating_to_loop`.

> **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst`, **line 34);** *backlink*
>
> Unknown interpreted text role "ref".

Command Line

- The location of the Galaxy token file has changed from `~/.ansible_galaxy` to `~/.ansible/galaxy_token`. You can configure both path and file name with the :ref:`galaxy_token_path` config.

> **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst`, **line 39);** *backlink*

Deprecated

No notable changes

Collection loader changes

The way to import a PowerShell or C# module util from a collection has changed in the Ansible 2.9 release. In Ansible 2.8 a util was imported with the following syntax:

```
#AnsibleRequires -CSharpUtil AnsibleCollections.namespace name.collection name.util filename
#AnsibleRequires -PowerShell AnsibleCollections.namespace_name.collection_name.util_filename
```

In Ansible 2.9 this was changed to:

```
#AnsibleRequires -CSharpUtil ansible collections.namespace name.collection name.plugins.module utils.util filename
#AnsibleRequires -PowerShell ansible_collections.namespace_name.collection_name.plugins.module_utils.util_filename
```

The change in the collection import name also requires any C# util namespaces to be updated with the newer name format. This is more verbose but is designed to make sure we avoid plugin name conflicts across separate plugin types and to standardise how imports work in PowerShell with how Python modules work.

Modules

- The `win_get_url` and `win_uri` module now sends requests with a default `User-Agent` of `ansible-httpget`. This can be changed by using the `http_agent` key.
- The `apt` module now honors `update_cache=false` while installing its own dependency and skips the cache update. Explicitly setting `update_cache=true` or omitting the param `update_cache` will result in a cache update while installing its own dependency.
- Version 2.9.12 of Ansible changed the default mode of file-based tasks to `0o600 & ~umask` when the user did not specify a

mode parameter on file-based tasks. This was in response to a CVE report which we have reconsidered. As a result, the mode change has been reverted in 2.9.13, and mode will now default to `0o666 & ~umask` as in previous versions of Ansible.

- If you changed any tasks to specify less restrictive permissions while using 2.9.12, those changes will be unnecessary (but will do no harm) in 2.9.13.
- To avoid the issue raised in CVE-2020-1736, specify a `mode` parameter in all file-based tasks that accept it.
- dnf and yum - As of version 2.9.13, the `dnf` module (and `yum` action when it uses `dnf`) now correctly validates GPG signatures of packages (CVE-2020-14365). If you see an error such as `Failed to validate GPG signature for [package name]`, please ensure that you have imported the correct GPG key for the DNF repository and/or package you are using. One way to do this is with the `rpm_key` module. Although we discourage it, in some cases it may be necessary to disable the GPG check. This can be done by explicitly adding `disable_gpg_check: yes` in your `dnf` or `yum` task.

Renaming from `_facts` to `_info`

Ansible 2.9 renamed a lot of modules from `<something>_facts` to `<something>_info`, because the modules do not return :ref:`Ansible facts <vars_and_facts>`. Ansible facts relate to a specific host. For example, the configuration of a network interface, the operating system on a unix server, and the list of packages installed on a Windows box are all Ansible facts. The renamed modules return values that are not unique to the host. For example, account information or region data for a cloud provider. Renaming these modules should provide more clarity about the types of return values each set of modules offers.

> **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel) (docs) (docsite) (rst) (porting_guides)porting_guide_2.9.rst, line 87);` *backlink*
>
> Unknown interpreted text role "ref".

Writing modules

- Module and module_utils files can now use relative imports to include other module_utils files. This is useful for shortening long import lines, especially in collections.

  Example of using a relative import in collections:

  ```
  # File: ansible_collections/my_namespace/my_collection/plugins/modules/my_module.py
  # Old way to use an absolute import to import module_utils from the collection:
  from ansible_collections.my_namespace.my_collection.plugins.module_utils import my_util
  # New way using a relative import:
  from ..module_utils import my_util
  ```

  Modules and module_utils shipped with Ansible can use relative imports as well but the savings are smaller:

  ```
  # File: ansible/modules/system/ping.py
  # Old way to use an absolute import to import module_utils from core:
  from ansible.module_utils.basic import AnsibleModule
  # New way using a relative import:
  from ...module_utils.basic import AnsibleModule
  ```

  Each single dot (.) represents one level of the tree (equivalent to `../` in filesystem relative links).

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel) (docs) (docsite) (rst) (porting_guides)porting_guide_2.9.rst, line 118)`
  >
  > Unknown directive type "seealso".
  >
  > ```
  >     .. seealso:: `The Python Relative Import Docs <https://www.python.org/dev/peps/pep-0328/#guido-s-decision>`_ go into more deta
  > ```

Modules removed

The following modules no longer exist:

- Apstra's `aos_*` modules. See the new modules at https://github.com/apstra.
- ec2_ami_find use :ref:`ec2_ami_facts <ansible_2_9:ec2_ami_facts_module>` instead.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel) (docs) (docsite) (rst) (porting_guides)porting_guide_2.9.rst, line 127);` *backlink*
  >
  > Unknown interpreted text role "ref".

- kubernetes use :ref:`k8s <ansible_2_9:k8s_module>` instead.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel) (docs) (docsite) (rst) (porting_guides)porting_guide_2.9.rst, line 128);` *backlink*
  >

Renamed modules

The following modules have been renamed. The old name is deprecated and will be removed in Ansible 2.13. Please update update

your playbooks accordingly.

- The `ali_instance_facts` module was renamed to :ref:`ali_instance_info <ali_instance_info_module>`.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)po>ting_guide_2.9.rst, line 371`); *backlink*
  > Unknown interpreted text role "ref".

- The `aws_acm_facts` module was renamed to :ref:`aws_acm_info <aws_acm_info_module>`.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst, line 372`); *backlink*
  > Unknown interpreted text role "ref".

- The `aws_az_facts` module was renamed to :ref:`aws_az_info <aws_az_info_module>`.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst, line 373`); *backlink*
  > Unknown interpreted text role "ref".

- The `aws_caller_facts` module was renamed to :ref:`aws_caller_info <aws_caller_info_module>`.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst, line 374`); *backlink*
  > Unknown interpreted text role "ref".

- The `aws_kms_facts` module was renamed to :ref:`aws_kms_info <aws_kms_info_module>`.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst, line 375`); *backlink*
  > Unknown interpreted text role "ref".

- The `aws_region_facts` module was renamed to :ref:`aws_region_info <aws_region_info_module>`.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst, line 376`); *backlink*
  > Unknown interpreted text role "ref".

- The `aws_s3_bucket_facts` module was renamed to :ref:`aws_s3_bucket_info <aws_s3_bucket_info_module>`. When called with the new name, the module no longer returns `ansible_facts`. To access return values, :ref:`register a variable <registered_variables>`.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst, line 377`); *backlink*
  > Unknown interpreted text role "ref".

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst, line 377`); *backlink*
  > Unknown interpreted text role "ref".

- The `aws_sgw_facts` module was renamed to :ref:`aws_sgw_info <aws_sgw_info_module>`.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst, line 380`); *backlink*
  > Unknown interpreted text role "ref".

- The `aws_waf_facts` module was renamed to :ref:`aws_waf_info <aws_waf_info_module>`.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst, line 381`); *backlink*
  > Unknown interpreted text role "ref".

- The `azure_rm_aks_facts` module was renamed to :ref:`azure_rm_aks_info <azure_rm_aks_info_module>`.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst, line 382`); *backlink*
  > Unknown interpreted text role "ref".

- The `azure_rm_aksversion_facts` module was renamed to :ref:`azure_rm_aksversion_info <azure_rm_aksversion_info_module>`.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst, line 383`); *backlink*
  > Unknown interpreted text role "ref".

- The `azure_rm_applicationsecuritygroup_facts` module was renamed to :ref:`azure_rm_applicationsecuritygroup_info <azure_rm_applicationsecuritygroup_info_module>`.

  > **System Message: ERROR/3** (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst, line 384`); *backlink*

Unknown interpreted text role "ref".

- The `azure_rm_appserviceplan_facts` module was renamed to :ref:`azure_rm_appserviceplan_info <azure_rm_appserviceplan_info_module>`.

  System Message: ERROR/3 (`D:\onboarding-resources\sample-onboarding-resources\ansible-devel\docs\docsite\rst\porting_guides\(ansible-devel)(docs)(docsite)(rst)(porting_guides)porting_guide_2.9.rst`, **line 385**); *backlink*

- The `vmware_datastore_facts` module was renamed to :ref:`vmware_datastore_info <vmware_datastore_info_module>`.

- The `vmware_guest_facts` module was renamed to :ref:`vmware_guest_info <vmware_guest_info_module>`.

- The `vmware_guest_snapshot_facts` module was renamed to :ref:`vmware_guest_snapshot_info <vmware_guest_snapshot_info_module>`.

- The `vmware_tag_facts` module was renamed to :ref:`vmware_tag_info <vmware_tag_info_module>`.

- The `vmware_vm_facts` module was renamed to :ref:`vmware_vm_info <vmware_vm_info_module>`.

- The `xenserver_guest_facts` module was renamed to :ref:`xenserver_guest_info <xenserver_guest_info_module>`.

- The `zabbix_group_facts` module was renamed to :ref:`zabbix_group_info <zabbix_group_info_module>`.

- The `zabbix_host_facts` module was renamed to :ref:`zabbix_host_info <zabbix_host_info_module>`.

Noteworthy module changes

- :ref:`vmware_cluster <vmware_cluster_module>` was refactored for easier maintenance/bugfixes. Use the three new, specialized modules to configure clusters. Configure DRS with :ref:`vmware_cluster_drs <vmware_cluster_drs_module>`, HA with :ref:`vmware_cluster_ha <vmware_cluster_ha_module>` and vSAN with :ref:`vmware_cluster_vsan <vmware_cluster_vsan_module>`.

- :ref:`vmware_dvswitch <vmware_dvswitch_module>`` accepts `folder` parameter to place dvswitch in user defined folder. This option makes `datacenter` as an optional parameter.

- :ref:`vmware_datastore_cluster <vmware_datastore_cluster_module>`` accepts `folder` parameter to place datastore cluster in user defined folder. This option makes `datacenter` as an optional parameter.

- :ref:`mysql_db <mysql_db_module>`` returns new `db_list` parameter in addition to `db` parameter. This `db_list` parameter refers to list of database names. `db` parameter will be deprecated in version 2.13.

- :ref:`snow_record <snow_record_module>`` and :ref:`snow_record_find <snow_record_find_module>`` now takes environment variables for `instance`, `username` and `password` parameters. This change marks these parameters as optional.

- The deprecated `force` option in `win_firewall_rule` has been removed.
- :ref:`openssl_certificate <openssl_certificate_module>``'s `ownca` provider creates authority key identifiers if not explicitly disabled with `ownca_create_authority_key_identifier: no`. This is only the case for the `cryptography` backend, which is selected by default if the `cryptography` library is available.

- :ref:`openssl_certificate <openssl_certificate_module>``'s `ownca` and `selfsigned` providers create subject key identifiers if not explicitly disabled with `ownca_create_subject_key_identifier: never_create` resp. `selfsigned_create_subject_key_identifier: never_create`. If a subject key identifier is provided by the CSR, it is taken; if not, it is created from the public key. This is only the case for the `cryptography` backend, which is selected by default if the `cryptography` library is available.

- :ref:`openssh_keypair <openssh_keypair_module>`` now applies the same file permissions and ownership to both public and private keys (both get the same `mode`, `owner`, `group`, and so on). If you need to change permissions / ownership on one key, use the :ref:`file <file_module>`` to modify it after it is created.

Plugins

Removed Lookup Plugins

- `redis_kv` use :ref:`redis <redis_lookup>`` instead.

Porting custom scripts

No notable changes

Networking

Network resource modules

Ansible 2.9 introduced the first batch of network resource modules. Sections of a network device's configuration can be thought of as a resource provided by that device. Network resource modules are intentionally scoped to configure a single resource and you can combine them as building blocks to configure complex network services. The older modules are deprecated in Ansible 2.9 and will be removed in Ansible 2.13. You should scan the list of deprecated modules above and replace them with the new network resource modules in your playbooks. See Ansible Network Features in 2.9 for details.

Improved `gather_facts` support for network devices

In Ansible 2.9, the `gather_facts` keyword now supports gathering network device facts in standardized key/value pairs. You can feed these network facts into further tasks to manage the network device. You can also use the new `gather_network_resources` parameter with the network `*_facts` modules (such as :ref:`eos_facts <eos_facts_module>`) to return just a subset of the device configuration. See :ref:`network_gather_facts` for an example.

Top-level connection arguments removed in 2.9

Top-level connection arguments like `username`, `host`, and `password` are removed in version 2.9.

OLD In Ansible < 2.4

```
- name: example of using top-level options for connection properties
  ios_command:
    commands: show version
    host: "{{ inventory_hostname }}"
    username: cisco
    password: cisco
    authorize: yes
    auth_pass: cisco
```

Change your playbooks to the connection types `network_cli` and `netconf` using standard Ansible connection properties, and setting those properties in inventory by group. As you update your playbooks and inventory files, you can easily make the change to `become` for privilege escalation (on platforms that support it). For more information, see the :ref:`using become with network modules<become_network>` guide and the :ref:`platform documentation<platform_options>`.
