Invalid Page Config

Why This Error Occurred

In one of your pages you did `export const config` with an invalid value.

Possible Ways to Fix It

The page's config must be an object initialized directly when being exported and not modified dynamically.

This is not allowed

```
export const config = 'hello world'
```

This is not allowed

```
const config = {}
config.amp = true
```

This is not allowed

```
export { config } from '../config'
```

This is allowed

```
export const config = { amp: true }
```
