Example app with Grommet

This example shows how to use the [Grommet UI library](#) with Next.js.

It works by extending the `<Document />` to enable server-side rendering of `styled-components`, which are used by Grommet, and extending `<App />` to provide a Grommet context (and optionally a theme) for all child pages and components.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

▲ Deploy

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-grommet with-grommet-app
# or
yarn create next-app --example with-grommet with-grommet-app
# or
pnpm create next-app -- --example with-grommet with-grommet-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).

Try it on CodeSandbox
