Contributors page

We have an official accounting of who is on the Angular Team (see https://angular.io/about?group=Angular), who are "trusted collaborators" (see https://angular.io/about?group=Collaborators), and so on.

The `contributors.json` should be maintained to keep our "org chart" in a single consistent place.

GDE listings

There are two pages:

- https://developers.google.com/experts/all/technology/angular (Googlers: source at http://google3/googledata/devsite/content/en/experts/all/technology/angular.html) which is maintained by Dawid Ostrowski based on a spreadsheet https://docs.google.com/spreadsheets/d/1_Ls2Kle7NxPBIG8f3OEVZ4gJZ8OCTtBxGYwMPb1TUVE/ed

- Ours: https://angular.io/about?group=GDE which is derived from `contributors.json`.

About the data

- Keys in `contributors.json` should be GitHub handles. (Most currently are, but not all.) This will allow us to use GitHub as the default source for things like name, avatar, etc.
- Keys are sorted in alphabetical order, please keep the sorting order when adding new entries.
- Pictures are stored in `aio/content/images/bios/<picture-filename>`.

Processing the data

Install https://stedolan.github.io/jq/ which is amazing.

```
for handle in $(jq keys[] --raw-output < aio/content/marketing/contributors.json)
do echo -e "\n$handle\n---------\n"; curl --silent -H "Authorization: token ${TOKEN}" https:
 | jq ".message,.name,.company,.blog,.bio" --raw-output
done
```

Relevant scripts are stored in `aio/scripts/contributors/`.
