Viewport `meta` tags should not be used in `_document.js`'s `<Head>`

Why This Error Occurred Adding `<meta name="viewport" ...>` in `pages/_document.js` will lead to unexpected results since it cannot be deduped. The viewport tag should be handled by `next/head` in `pages/_app.js`.

Possible Ways to Fix It Set your viewport `meta` tag in `pages/_app.js` instead:

```
// pages/_app.js
import Head from 'next/head'

function MyApp({ Component, pageProps }) {
  return (
    <>
      <Head>
        <meta name="viewport" content="viewport-fit=cover" />
      </Head>
      <Component {...pageProps} />
    </>
  )
}

export default MyApp
```
