Basic CSS example

Next.js has built-in support for [CSS Modules](#) allowing you to write scoped CSS by automatically creating a unique class name. CSS Module files can be imported anywhere in your application and you don't have to worry about collisions.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

▲ **Deploy**

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example basic-css basic-css-app
# or
yarn create next-app --example basic-css basic-css-app
# or
pnpm create next-app -- --example basic-css basic-css-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
