gh-pages Hello World example

This example shows the most basic idea behind Next. We have 2 pages: `pages/index.js` and `pages/about.js` . The former responds to `/` requests and the latter to `/about` . Using `next/link` you can add hyperlinks between them with universal routing capabilities.

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example gh-pages gh-pages-app
# or
yarn create next-app --example gh-pages gh-pages-app
# or
pnpm create next-app -- --example gh-pages gh-pages-app
```

Deploy it to github

Edit `env-config.js` and replace `'Next-gh-page-example'` by your project name.

Edit `next.config.js` and replace `'Next-gh-page-example'` by your project name.

1. Create repository.
2. Link it to your github account.
3. Publish your default branch, e.g. `main` .

```
npm run deploy
```

Test it:

Replace `<github-user-name>` and `<github-project-name>`

```
https://<github-user-name>.github.io/<github-project-name>/
```

Example:

```
https://github.com/thierryc/Next-gh-page-example/

https://thierryc.github.io/Next-gh-page-example/
```
