Example app with aphrodite

This example features how to use a different styling solution than [styled-jsx](#) that also supports universal styles. That means we can serve the required styles for the first render within the HTML and then load the rest in the client. In this case we are using [Aphrodite](#).

For this purpose we are extending the `<Document />` and injecting the server side rendered styles into the `<head>`.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

▲ **Deploy**

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example with-aphrodite with-aphrodite-app
# or
yarn create next-app --example with-aphrodite with-aphrodite-app
# or
pnpm create next-app -- --example with-aphrodite with-aphrodite-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
