mix-fast

Fast mix autocompletion plugin.

This script caches the output for later usage and significantly speeds it up. It generates a .mix_tasks cache file for current project. Currently if you want to update cache you should remove .mix_tasks file

Inspired by and based on rake-fast zsh plugin.

This is entirely based on [this pull request by Ullrich Schäfer](#), which is inspired by [this Ruby on Rails trick from 2006](#).

Installation

Just add the plugin to your `.zshrc` :

```
plugins=(foo bar mix-fast)
```

You might consider adding `.mix_tasks` to your [global .gitignore](#)

Usage

`mix` , then press tab
