unstable_useFlushEffects can not be called on the client

Why This Error Occurred The `unstable_useFlushEffects` hook was executed while rendering a component on the client, or in another unsupported environment.

Possible Ways to Fix It The `unstable_useFlushEffects` hook can only be called while *server rendering a client component*. As a best practice, we recommend creating a wrapper hook:

```js
// lib/use-style-libraries.js
import { unstable_useFlushEffects as useFlushEffects } from 'next/streaming'

export default function useStyleLibraries() {
  if (typeof window === 'undefined') {
    // eslint-disable-next-line react-hooks/rules-of-hooks
    useFlushEffects([
      /* ... */
    ])
  }
  /* ... */
}
```
