Redirects Example

This example shows how to use [redirects in Next.js](#) to redirect an incoming request path to a different destination path.

The index page (`pages/index.js`) has a list of links that match the redirects defined in `next.config.js` . Run or deploy the app to see how it works!

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

[▲ Deploy]

How to use

Execute `create-next-app` with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example redirects redirects-app
# or
yarn create next-app --example redirects redirects-app
# or
pnpm create next-app -- --example redirects redirects-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
