- Update `ActiveJob::QueueAdapters::QueAdapter` te remove deprecation warning

  Remove a deprecation warning introduced in que 1.2 to prepare for changes in que 2.0 necessary for Ruby 3 compatibility.

  Damir Zekic and *Adis Hasovic*

- Add missing `bigdecimal` require in `ActiveJob::Arguments`

  Could cause `uninitialized constant ActiveJob::Arguments::BigDecimal (NameError)` when loading Active Job in isolation.

  Jean Boussier

- Allow testing `discard_on/retry_on ActiveJob::DeserializationError`

  Previously in `perform_enqueued_jobs`, `deserialize_arguments_if_needed` was called before calling `perform_now`. When a record no longer exists and is serialized using GlobalID this led to raising an `ActiveJob::DeserializationError` before reaching `perform_now` call. This behaviour makes difficult testing the job `discard_on/retry_on` logic.

  Now `deserialize_arguments_if_needed` call is postponed to when `perform_now` is called.

  Example:

  ```ruby
  class UpdateUserJob < ActiveJob::Base
    discard_on ActiveJob::DeserializationError

    def perform(user)
      # ...
    end
  end

  # In the test
  User.destroy_all
  assert_nothing_raised do
    perform_enqueued_jobs only: UpdateUserJob
  end
  ```
