react-fast-refresh

This package updates modified React components in the running app for faster feedback after changing a file. To be enabled, your app must:

- Use the `hot-module-replacement` package
- Use React 16.9.0 or newer

This package is disabled in production. It currently only supports the modern web client.

Learn more in the React Fast Refresh docs

React Fast Refresh can be disabled by setting the `DISABLE_REACT_FAST_REFRESH` environment variable before starting Meteor.
