Catch All Routes Example

This example shows how to use [Catch all routes](#) in Next.js, which allows a dynamic route to catch all paths.

The catch all page is in `pages/post/[...slug]`, it matches any path after `/post`, like the following:

- `/post/first-post`,
- `/post/2020/first-post`
- `/post/2020/first-post/with/catch/all/routes`
- Anything that matches the glob `/post/**`

You can use `next/link` as displayed in this example to route to these pages client side.

Deploy your own

Deploy the example using [Vercel](#) or preview live with [StackBlitz](#)

[▲ Deploy]

How to use

Execute [create-next-app](#) with [npm](#) or [Yarn](#) to bootstrap the example:

```
npx create-next-app --example catch-all-routes catch-all-routes-app
# or
yarn create next-app --example catch-all-routes catch-all-routes-app
# or
pnpm create next-app -- --example catch-all-routes catch-all-routes-app
```

Deploy it to the cloud with [Vercel](#) ([Documentation](#)).
